

Uni-Directional Integrated Photo Detector UD-IPD

Description

Miniature Uni-Directional Integrated Photo Detector, UD-IPD, is based on a key technology that integrates thin film tap filter and photodiode. The unidirectional feature allows power monitoring from input port only. The device is integrated by Browave alignment technology and strategy partner's high sensitivity and reliable mini TO-CAN photodiode. The UD-IPD provides a cost-effective and high performance solution for power monitoring and amplifier system.

Features

- ▶ Low insertion loss & PDL
- ▶ Superior response & low dark current
- ▶ High directivity
- ▶ High reliability

Application

- ▶ DWDM channel monitoring
- ▶ Optical amplifier (EDFA, Raman)
- ▶ VOA & V-Mux
- ▶ Multi channels OADM
